Weed Control & Fertilization Programs

4 Application Premium Weed and Feed Program

Includes 4 applications. (Includes 1, 2, 4, & 5)

Recommended Program

3 Application Weed and Feed Program

Includes applications 1, 3 & 5. Service calls are free between applications.

2 Applications Program

Includes application 1 and 4, depending on what time of the year you start.

Application 1

Spring — Balanced fertilization, weed control, and pre-emergent crabgrass control where appropriate.

Application 2

Early Summer — Balanced fertilization and weed control. We take time to treat emerging weeds that need warmer soil temperatures to germinate.

Application 3

Mid Summer — Balanced fertilization and weed control for middle of the summer application.

Application 4

Late Summer — Balanced fertilization regulated for higher temperatures and weed control for those late summer weeds.

Application 5

Fall — Balanced fertilization and weed control to boost lawn health going into winter and clean up persistent weeds.

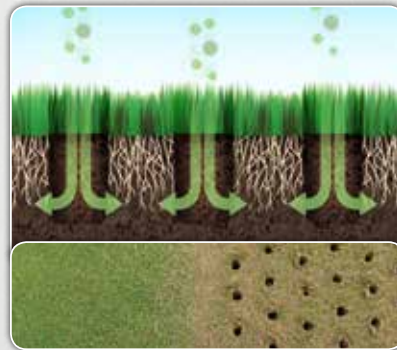

Mowing, Edging, and Spring/Fall Cleanups

Commercial & Residential mowing services are offered and designed to meet each customer's needs. Mowing, Edging, and Spring & Fall Cleanup are available.

Core Aeration & Power Raking

Core Aeration is the process of pulling plugs from the soil, thereby allowing air, water, and nutrients an avenue to reach the root zone of the grass plants so they may feed. In soils where there is a high concentration of clay, this is an especially important part of developing and keeping a healthy lawn. Core Aeration is suggested when the lawn has become compacted, or when the thatch layer becomes excessive. Power Raking is the process of removing excess thatch from the lawn. This process is only necessary when the thatch layer becomes 1 inch thick or more.

Mosquito Control

If you would like relief from the sometimes persistent onslaught of mosquitoes, we can help. We spray your lawn, shrubbery and foliage where mosquitoes harbor during the day. When mosquitoes land on the treated area, they are killed within approximately 10 minutes. We can't guarantee you'll ever be bitten by a mosquito, but the chances are tremendously reduced. A treatment usually lasts about 3 to 4 weeks. If you need protection for a single event, or if you would like a program that will keep the mosquitoes at bay for the summer, we have a solution for you.
